August 29 2018 - I followed the instructions and got to step 4, but when I enter my key into the keygen, I get the following error: The validation of the key of your account is not complete and the operation is not allowed. And below: This key does not have a validation date. If I enter an activation date that doesn't match a valid key, I get a different error: The key is invalid. I'm pretty sure it's a problem with my key entry. What can I do? My Steam key (which I bought from the dealer) works fine and I get a Steam passcode when I log into the game. Is it just a bug in the keygen?
