
ManageEngine Exchange Reporter Plus Crack PC/Windows

ManageEngine Exchange Reporter Plus Free Download is a powerful and advanced reporting solution designed for Microsoft Exchange Servers. Without stopping with plain Exchange Reports for vigilance, this solution offers statistics and analytics including mailbox size growth rate, server usage pattern, delivery times by servers, mail traffic analysis, and other important data, using which an administrator can take informed decisions to optimize the efficiency of his organization's Exchange setup. In other terms, Exchange Reporter Plus is an encapsulation of all the "analysis and supervision" required on behalf of an Exchange administrator to manage his email communication infrastructure efficiently! ManageEngine Exchange Reporter Plus Features:

- Conducts comprehensive Exchange environment analysis, which identifies mailbox growth rate, and provides you with the following benefits: ? What happens to the mailboxes? How much space is being used? What is the rate of mailbox growth? ? How is email traffic distributed across your servers? What is the wait time for an email to be delivered from a server? What is the nature of the error? How many emails are out of order? How much disk space are these error emails occupying?
- Offers in-depth email statistics, such as supports: ? How many concurrent threads? ? How

long are they running? ? Which threads are getting hit the most? ? Which mailboxes are the most and least active? ? Which servers are the most and least busy? ? How much disk space does the "non-durable" and "durable" mailboxes are occupying? How much space are new mailboxes consuming? • Allows you to analyze the free space left on your mailbox servers using the "box size analysis" tab.

- Allows you to find the email replication jobs that have taken too long to complete.
- Gives you an eye-view of your Exchange email performance on a traffic-by-server basis.
- Gives you a view of all outgoing email threads.
- Gives you a glimpse of the current server/mailbox usage by mailbox type.
- Moves on to see what folders have been taking up the most disk space and how much is being used.
- Enables you to identify and address performance bottlenecks, and to assess overall mail
