Anaglyph Decoder

Anaglyph Decoder is a simple application that decodes anaglyph tridimensional photos. This means that you can see the Anaglyph 3d Photo in 2d (black & white) w/o using 3D (red-cyan) glasses. It supports the following anaglyph views, "Ez3d", "3d", "Anaglyph", "SideBySide", "Side by side", "Side by Side-Anaglyph", "Animation". It also supports the following anaglyph resolution: "640x480", "800x600", "1024x768", "1280x1024", "1536x2048". Anaglyph Decoder supports most of the popular graphic file formats. To use it just install it in a folder and then double click to open it. Then paste an anaglyph photo in it. Use the buttons at the bottom to change the view. The Anaglyph View in Anaglyph Decoder: The following views are the supported by Anaglyph Decoder. To see them in action type "Anaglyph" for the built-in view. Ez3d: The best panoramic view is this type of view, what you get is a whole sphere photo. To see it in action type: "Anaglyph". 3D: The 3D view is what you get when you use 3D cards with your computer. To see it in action type: "Anaglyph". Anaglyph: Anaglyph view, what you get is a quad photo. This is a legacy view, but it is still the best one. To see it in action type: "Anaglyph". SideBySide: The best zoom view is this type of view, what you get is a semi sphere photo (like the ones you see in newspapers). To see it in action type: "SideBySide". Side by Side-Anaglyph: This is a legacy view, but is still the best one. To see it in action type: "SideBySide-Anaglyph". Animation: This view is what you get when you use the "Fly" software with your 3D cards. In this view you get the same panoramic photo that you see in the 3D cards. To see it in action type: "Animation".

What's New In?

Anaglyph Decoder is simple application for demodulating anaglyph images (3d images made out of two different pictures, usually red-cyan). 2d images are encoded in 3d format. The application decodes those to Windows screens full of black and white pictures. You can capture entire Windows screen area or save only a rectangle. You can see the Left and Right Eye decoded separately or the two eyes binarized to produce a single picture with the eyes on top. You can also try the side by side mode where you will see in two different Windows screens - one of the eyes is decoded. The application allows for animation (you can capture an area many times, and it all gets saved in one animated gif), but this is not always a good idea (sometimes the screen changes during the capture). After the capture, you can preview the entire anaglyph image (the entire screen will be gray, depending on the depth of the anaglyph). If you capture the region in the left, the entire screen will be gray, but if the region is on the right half of the screen you will see what you are capturing. The capture tool can save to Windows Clipboard or directly to file, you can save to file directly by dragging to the the clipboard and saving there.
