TlTerm

The latest version of tlTerm is a term list creation and editing tool that helps you easily create, edit and display term lists for virtually any language in the world. Specially designed for translators, this software lets you save and convert your term lists to many formats, including CSV, HTML, XML, RTF and ODBC, and allows you to search and preview terms in a variety of ways. The software also provides you with the tools to easily create and manage term lists for any number of languages, as well as an option to work with teams in the same project. It supports the input of words as well as phrases in any language and provides you with the tools to accurately identify their meanings. It also allows you to add many other elements to your term lists, such as images, audio files, and links to specific websites, and offers you the option to generate term lists for multiple projects at a time. tlTerm is an easy to use application aimed mainly at professional terminologists and translators, as it offers them the proper means to create and edit term lists. The program supports virtually all existing languages, generally accepting all Unicode characters without a glitch. In order to create a new term list using this application, you first need to select the languages you intend to work with. Subsequently, you have to choose the relevant fields for your project, namely 'Term', 'Part of Speech', 'Subject', 'Usage Register', 'Definition', 'Pronunciation' and 'Audio. After creating your project, you can start adding various entries. tlTerm enables you to get a preview of the created entry in real-time, thus letting you know which fields were completed or not, or whether your require more information about a particular field. For each added term, tlTerm allows you to perform web as well as image searches on the Internet, a feature particularly useful in the case of highly visual terminology. Additionally, tlTerm provides you with the option of working in teams, by assisting you in creating several users. Each user can login with their credentials, making it very easy to determine which terms were added by whom. The application also allows you to work with TBX files, so you can import existing termbases and edit them to suit your needs. Similarly, all projects can be exported to a variety of formats, including CSV, HTML, XML, RTF and ODBC. An interesting feature provided by tlTerm is the 'Microsoft Word Integration', which was designed particularly

What's New in the TlTerm?

I nteractive English and Spanish Thesaurus Manager Utilizes any version of MS Word (tm) 2. A European Language Center (EuLC) v. 3.0.5 This application helps you to read, understand, and write a wide variety of European languages, including Greek, French, Spanish, Italian, Portuguese, Croatian, and Slovenian.
