You can easily learn the basics of using Photoshop and move on to more advanced techniques in Chapter 18. # DOSING IT: THE VARIES OF Photoshop Photoshop can work in one of two modes: * **Photoshop workspace mode:** As you move through the programs, you see the workspace open up. As your image changes, you see the workspace adjusted to accommodate it. You can't manipulate your image once you load a new image. * **Photo-editing mode:** You see your photo image on the left side of the screen. Any changes that you make affect only that image. To manipulate other photos, you have to cycle through other photos on the list. ## Understanding the Hierarchy of Materials To work with Photoshop, you use editing commands on different layers, called `_layers_`. These layers contain all the changes that you make to your image. In the past, people referred to them as layers, but now that the program is a `_hierarchy of materials_` (HOM), it can store multiple layers and also multiple files in the same file. Figure 4-1 shows how Photoshop stores multiple layers (Image 1, Image 2, and Image 3 in the Layers palette). You can have multiple files open in Photoshop at the same time. FIGURE 4-1: Photoshop uses layers to store information about each layer in a separate file. Most files can contain multiple layers, but not all layers have to. The features and options for layers vary. The editing commands for modifying one or more layers work the same way for any type of layer, so they work the same way in all the files in a project.

The brothers and sister of a family in the U.K. say they just returned from a vacation and found their dog eating the meat of a dead fawn. Samantha and Sarah Archibald said they received a call from their neighbor, who told them he found the dead animal near their shed. "I went and picked him up this morning," Sam wrote on Facebook. "I'm so mad that this did happen! We were gone from home overnight and I'm sure he must have found him out the back of the shed and then must have decided to chow down on him." The 26-pound pit bull mix, Jake, is a family member and it's "sickening to think he would do this to a dead animal," the siblings wrote. "I have to go and chop him up tomorrow. Oh my god. It's crazy! We're all heart broken!" Sam added. Jake is currently in quarantine and the family said it's getting the dog tested. They are worried about rabies. "The whole day has been so upsetting. What's going to happen now is that it's all too much for me and I may have to go into hospital tomorrow," Sam wrote. The Archibalds shared a picture of Jake eating the fawn. Folders are a way of grouping images together for easier organisation. You can create folders by dragging them to the Organizer. The History Panel is where you can access all the steps you've taken in a document. It's a great way of looking back over what you've done. The History Panel also allows you to revert to any of the steps taken to the state you started the image with. The Layers panel is one of the best ways to organise your images. With layers you can arrange them in a hierarchy of grouped layers. The Levels panel allows you to find the best balance of exposure and contrast in an image.
