Namaste- The Human Body The
other day I was discussing the odd
things we do with our bodies in
order to survive. Our lungs, our
sweat glands, our eyeballs, our ear
canals, our mouth, nostrils, and
several other "functional systems"
of the body we do not know if or
why we use. One of the best
examples of an unknown function
in our body is the biliary system.
The biliary system is a network of

ducts, and glands, that drain bile from the liver into the intestines.

Bile is made in the liver from a compound called bilirubin.

Bilirubin is yellow. It is useful in helping digest fats because it gets into the bloodstream and combines with bile salts. The opposite is also true; eating too much meat can be bad for you because the excessive protein can also increase bilirubin in your system. After a meal, bile is produced by the liver and stored in the gall bladder. For most people, digestion is a continuous process,

and there are many times in a person's life when it may stop and stay that way. It could be due to eating too little food, or even due to a lack of a properly formed or working liver. Because of this, the gland in the wall of the gall bladder that makes bile is the only one in the body to work constantly, not only at the beginning of the meal, but for hours afterward. The stored bile is then drained into the small intestine, where the chyme or food and fluids pass through. Why? One could make the argument that bile

is a sort of stomach cleanser, but that's not really the case. The job of the bile is to help the small intestine digest food. It is the last line of defense for a digestive system not processing properly. Let's step back and look at the name of the system we are discussing in this blog, biliary system. The word "biliary" comes from the Latin words "bilis" and "galla", which means "diluted bile." This system exists to get bile away from the liver, into the gut, where it does its job. I hope I have made

the point that a biliary system is just a system to produce bile, and get it away from the liver and into the gut. That's it
